

Project Defence

Rehearsal

Check if your ontology has a class that corresponds to each of these road signs.

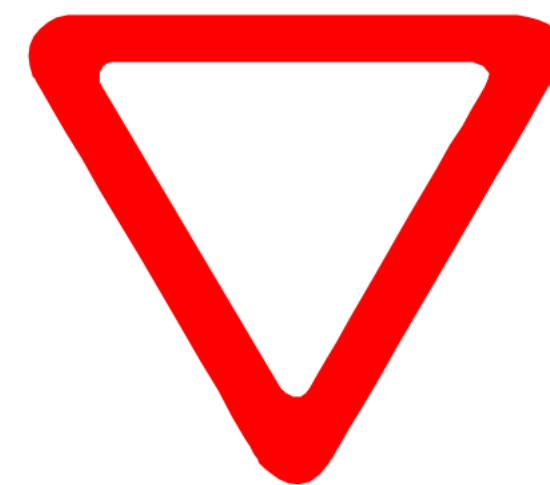

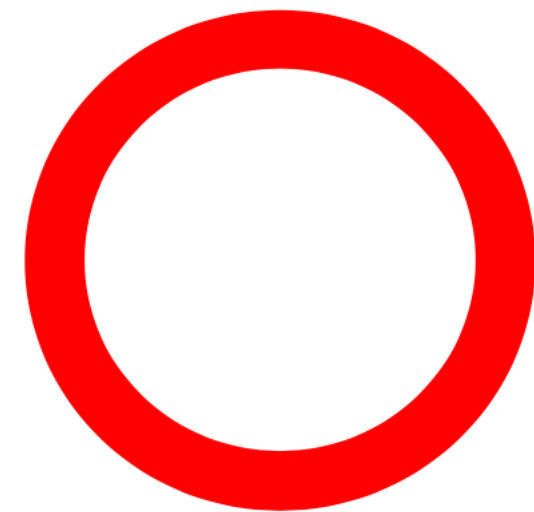

If classes are missing, add them to the ontology with their corresponding definitions (i.e, their necessary and sufficient conditions)

Write and execute the DL query that formalises the following question:

Which classes of road signs don't have any symbols on them?

If your ontology does not define road signs with the necessary detail to answer this question, change the definitions of these two road signs so that this question can be answered:

Import the alignment
to MTDS classes into
your ontology

Write and execute the DL query that formalises the following question:

*Are the road sign classes for MTDS categories **information–minimum–speed–40–g1** and **regulatory–maximum–speed–limit–40–g1** disjoint?*
